# LifeSave Investment Bond

## Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

## General Information

Product Name	LifeSave Investment Bond
Manufacturer	Zurich Life Assurance plc
Contact Information	<a href="http://www.zurichlife.ie/contact-us/">www.zurichlife.ie/contact-us/</a> For customer services, please call (01) 799 2711 or email <a href="mailto:customerservices@zurich.com">customerservices@zurich.com</a>
Regulatory Authority	Central Bank of Ireland
Date of this Document	31/12/17

## What is this product?

### Type

This product is a unit-linked investment product in the form of a life insurance contract between the policy owner(s) and Zurich Life Assurance plc ('Zurich').

### Objectives

This is a single premium investment product designed to allow policy owners to invest in Zurich's range of unit-linked investment options ('funds'). It is designed to allow investors with a broad spectrum of risk appetites to choose from the available funds and select funds that match their risk appetite. The range of funds offered includes equity funds, bond funds, cash funds, funds with a combination of assets as well as other investment options. The return for you, the investor, will depend on the performance of the assets in your chosen funds. The risk profile of the funds is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This product is intended to meet the needs of investors seeking to put their money into assets for the purpose of long-term growth. The product offers a range of funds designed to meet the needs of a broad spectrum of risk appetites from those investors who are seeking short term stability, to those who are seeking long-term real growth, while being aware of their ability to lose some or all of their investment. Zurich recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### Specific Information on Fund Options

Additional information for the range of funds including fund objectives and the intended retail investor can be found at [www.zurichlife.ie/broker-centre/key-info-docs](http://www.zurichlife.ie/broker-centre/key-info-docs)

### Term

This product has no maturity date. Although you may encash your policy at any time, you should be aware that an investment policy is a long-term financial commitment. Depending on the fund or combination of funds you select, you may be more exposed to fluctuating capital values in the short term. This investment is unsuitable if you have a short time horizon or if you are likely to need to use the proceeds of the policy in a financial emergency. You should be satisfied as to the long-term nature of this commitment with regard to your needs, resources and circumstances before entering into such a contract. Zurich may terminate the policy and cease to pay policy benefits if it considers you a sanctioned person or your directors or officers as sanctioned persons, or you conduct an activity which is sanctioned, according to trade or economic sanctions laws and regulations.

## What are the risks and what could I get in return?

### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in your product easily or you may have to cash it in at a price that significantly impacts on how much you get back.

### Summary Risk Indicator (SRI)

This product offers a range of funds with Summary Risk Indicator (SRI) values of 1 to 4. This rates the range of potential losses from future performance from a very low to a medium level. The SRI is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. The level of risk and the performance of the product will depend on the underlying funds chosen. A range of performance scenario projections, as well as the SRI information on our range of funds are available on our website: [www.zurichlife.ie/broker-centre/key-info-docs](http://www.zurichlife.ie/broker-centre/key-info-docs)

This product does not include any protection from future market performance so you could lose some or all of your investment. Some of the funds may not be easily cashed in. For some funds you will be unable to cash in early or you will have to pay high costs or make a large loss if you do so. If Zurich is not able to pay you what is owed, you could lose your entire investment. Additional information for the range of funds can be found at [www.zurichlife.ie/broker-centre/key-info-docs](http://www.zurichlife.ie/broker-centre/key-info-docs)

## What happens if Zurich is unable to pay out?

If Zurich is unable to fulfil its obligations as a result of its own insolvency or the insolvency of another party linked to the fund you have chosen, you may suffer a financial loss. There is no State guarantee scheme that can compensate you for all or part of these losses.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and they are not included in the table below. The table below shows the range of cost impacts on this product, which depend on the funds chosen. To see the specific cost impacts for each fund, please see our website: [www.zurichlife.ie/broker-centre/key-info-docs](http://www.zurichlife.ie/broker-centre/key-info-docs)

Investment: €10,000

Total Cost Impact	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	From €1,126 to €1,623	From €1,311 to €3,862	From €1,661 to €8,445
Impact On Return (RIY) Per Year	From 11.26% to 16.23%	From 3.47% to 6.58%	From 2.59% to 5.47%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	From 0.87% to 1.26%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	From 0.00% to 0.19%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	From -0.10% to 2.34%	The impact of the costs of buying and selling underlying investments for the product.
	Other Ongoing Costs	From 1.72% to 3.57%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0%	The impact of performance fees.
	Carried Interests	0%	The impact of carried interests.

### How long should I hold it and can I take my money out early?

#### Recommended holding period: 7 years

You may encash your policy at any time. However, you should be aware that an investment policy is a long-term financial commitment. Depending on the fund or combination of funds you select, you may be more exposed to fluctuating capital values in the short term. Seven years has been chosen as the recommended holding period for this product, to enable you to have sufficient time invested to reduce the risk profile of the investment. Early disinvestment can increase the risk profile of investment in this product. Surrender penalties can also have a material effect on the charges being incurred at shorter investment periods. This impact can be seen in the Costs Over Time table. Surrender penalties will not apply for investments held for the recommended holding period or longer. To disinvest money from this product or to switch between funds, please contact your Financial Broker/Advisor. Units can usually be sold on any business day, but this may be subject to some restrictions for market reasons or at Zurich's discretion. Some funds within this product may have restrictions on early disinvestment or early disinvestment may affect capital guarantees. This information is available for our range of funds on our website: [www.zurichlife.ie/broker-centre/key-info-docs](http://www.zurichlife.ie/broker-centre/key-info-docs)

### How can I complain?

If you are a policy owner, beneficiary or insured person, and you are not satisfied in any way with your policy, you should contact our Customer Services team. If Zurich is unable to satisfy your complaint, you may have recourse to the Financial Services & Pensions Ombudsman's office. Details of the services provided by the Financial Services & Pensions Ombudsman can be supplied to you upon request.

Zurich Customer Services,  
Zurich House, Frascati Road,  
Blackrock, Co. Dublin.

# Active Asset Allocation

## For the LifeSave Investment Bond

### Objectives

The Active Asset Allocation Fund is an actively managed fund which aims to achieve growth through capital gains and income from a well-diversified portfolio of global equities, government bonds, property shares, cash and alternative assets. The alternative assets currently may include oil, gold, inflation-linked government bonds, water, soft commodities, industrial metals and corporate bonds. Many of the asset classes in this fund have historically had low correlations to movements in equity prices and hence are expected to dampen the volatility of the fund's returns. Zurich Life's award-winning team of fund managers actively manage the allocation between the different asset classes. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€7,545.74	€6,436.41	€5,717.81
	Average return each year	-24.5%	-10.4%	-7.7%
Unfavourable Scenario	What you might get back after costs	€8,628.28	€9,396.99	€10,368.33
	Average return each year	-13.7%	-1.5%	0.5%
Moderate Scenario	What you might get back after costs	€9,494.10	€11,372.78	€13,343.84
	Average return each year	-5.1%	3.3%	4.2%
Favourable Scenario	What you might get back after costs	€10,435.70	€13,749.37	€17,155.01
	Average return each year	4.4%	8.3%	8.0%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,278.26	€1,911.97	€3,039.28
Impact On Return (RIY) Per Year	12.78%	4.09%	3.10%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.97%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.03%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.13%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.97%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Active Fixed Income

## For the LifeSave Investment Bond

### Objectives

The Active Fixed Income Fund is an actively managed bond fund. It primarily invests in bonds issued by eurozone governments and bond-based financial instruments. It may also invest in supranational bonds and other investment grade corporate and non-sovereign bonds. The investment parameters allow for up to 30% of the fund to be invested overseas with the core invested in eurozone bonds. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

# Balanced

## For the LifeSave Investment Bond

### Objectives

The Balanced Fund is an actively managed fund which aims to achieve growth through capital gains and income from a well-diversified portfolio of global equities and equity-based financial instruments. This fund will also invest in bonds issued by governments, supranational bodies, other investment grade corporate and non-sovereign bonds and/or bond-based financial instruments. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€7,277.00	€5,960.76	€5,145.70
	Average return each year	-27.2%	-12.1%	-9.1%
Unfavourable Scenario	What you might get back after costs	€8,716.25	€10,251.33	€12,315.02
	Average return each year	-12.8%	0.6%	3.0%
Moderate Scenario	What you might get back after costs	€9,817.78	€12,996.51	€16,851.59
	Average return each year	-1.8%	6.8%	7.7%
Favourable Scenario	What you might get back after costs	€11,039.01	€16,447.74	€23,018.63
	Average return each year	10.4%	13.2%	12.6%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,351.21	€2,245.09	€3,947.62
Impact On Return (RIY) Per Year	13.51%	4.34%	3.29%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	1.02%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.05%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.30%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.92%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Dividend Growth

## For the LifeSave Investment Bond

### Objectives

The Dividend Growth Fund is an actively managed fund which aims to achieve growth through capital gain and income, from participation in a managed portfolio of global equities, the dividend yields of which tend to be higher than their markets' dividend yield and, in addition, have the capacity to further increase dividends. The fund, which will be well diversified, will seek to invest in high calibre equities. It will seek to avoid companies where the dividend payments are deemed to be unsustainable. Dividends received by the fund are reinvested in the fund. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

Zurich Life Assurance plc is regulated by the Central Bank of Ireland.

Intended for distribution within the Republic of Ireland.

# Dynamic

## For the LifeSave Investment Bond

### Objectives

The Dynamic Fund is an actively managed fund which aims to achieve growth through capital gains and income from a well-diversified global portfolio of quality equities and equity-based financial instruments. It may also include from time to time some bonds issued by governments, supranational bodies, other investment grade corporate and non-sovereign bonds and/or bond-based financial instruments. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,739.16	€5,051.52	€4,090.72
	Average return each year	-32.6%	-15.7%	-12.0%
Unfavourable Scenario	What you might get back after costs	€8,545.00	€10,065.73	€12,242.49
	Average return each year	-14.5%	0.2%	2.9%
Moderate Scenario	What you might get back after costs	€9,925.15	€13,566.07	€18,162.35
	Average return each year	-0.7%	7.9%	8.9%
Favourable Scenario	What you might get back after costs	€11,500.12	€18,239.10	€26,879.09
	Average return each year	15.0%	16.2%	15.2%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,374.81	€2,364.64	€4,296.81
Impact On Return (RIY) Per Year	13.75%	4.42%	3.35%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	1.03%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.06%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.32%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.95%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Euro Inflation-linked Intermediate Duration Fixed Income (Dimensional)

## For the LifeSave Investment Bond

### Objectives

The Euro Inflation-linked Intermediate Duration Fixed Income Fund (Dimensional) aims to provide the return of medium-term debt, which is protected from inflation in the Eurozone. The fund is managed on a discretionary basis and invests in high quality debt such as bonds, commercial paper and bank debt. This debt is issued by governments, other public bodies and companies from developed countries and, at the time of purchase, this debt is generally rated at least P1, A-1 or F1 short term or AA- or Aa3 long-term by the major rating agencies. Generally, the fund will maintain an average duration of its investments with a range between five and ten years. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

# Fund of REITs

## For the LifeSave Investment Bond

### Objectives

The Zurich Life Fund of REITs (Real Estate Investment Trusts) is a unit-linked fund that gives access to predominantly commercial property by investing in a selection of REITs. The fund may also hold up to 20% of its assets in cash. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in your fund easily or you may have to cash it in at a price that significantly impacts on how much you get back.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

# Global Short-term Fixed Income (Dimensional)

## For the LifeSave Investment Bond

### Objectives

The Global Short-term Fixed Income Fund (Dimensional) aims to maximise current income while preserving the value of investments. The fund is managed on a discretionary basis and invests in high quality debt such as bonds, commercial paper, bank and corporate debt. This debt is issued by governments, other public bodies and companies from developed countries and, at the time of purchase, this debt is generally rated at least AA- or Aa3 long-term by the major rating agencies. The fund will generally maintain an average maturity of its investments to five years or less. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€8,647.76	€8,537.02	€8,380.16
	Average return each year	-13.5%	-3.9%	-2.5%
Unfavourable Scenario	What you might get back after costs	€8,742.24	€8,638.06	€8,439.70
	Average return each year	-12.6%	-3.6%	-2.4%

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,197.81	€1,617.24	€2,255.60
Impact On Return (RIY) Per Year	11.98%	4.07%	3.18%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.89%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.00%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.00%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	2.30%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Global Short-term Investment Grade Fixed Income (Dimensional)

## For the LifeSave Investment Bond

### Objectives

The Global Short-term Investment Grade Fixed Income Fund (Dimensional) aims to maximise total returns from the universe of debt obligations in which the fund invests. The fund is managed on a discretionary basis and invests in investment grade debt instruments such as, without limitation, bonds, commercial paper, bank and corporate debt. This debt is issued by governments, other public bodies and companies from developed countries and, at the time of purchase, this debt is generally rated at least BBB- or Baa3 by the major rating agencies. In addition to investment grade instruments, the fund may invest in unrated instruments which are deemed to be of similar quality. The fund will generally maintain an average duration of its investments to three years or less. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€8,769.39	€8,781.67	€8,702.02
	Average return each year	-12.3%	-3.2%	-2.0%
Unfavourable Scenario	What you might get back after costs	€8,792.59	€8,697.99	€8,484.07
	Average return each year	-12.1%	-3.4%	-2.3%
Moderate Scenario	What you might get back after costs	€8,960.66	€9,033.16	€8,919.22
	Average return each year	-10.4%	-2.5%	-1.6%
Favourable Scenario	What you might get back after costs	€9,131.47	€9,380.75	€9,376.20
	Average return each year	-8.7%	-1.6%	-0.9%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

# Global Targeted Returns (Invesco)

## For the LifeSave Investment Bond

**You are about to invest in a fund that is not simple and may be difficult to understand.**

### Objectives

The Global Targeted Returns Fund (Invesco) seeks to deliver long-term capital growth with a low tolerance for capital loss. The fund aims to outperform cash returns. The fund uses a broad range of investment ideas based on advanced derivative techniques to gain exposure to a selection of assets across all economic sectors worldwide. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

# International Equity

## For the LifeSave Investment Bond

### Objectives

The International Equity Fund is an actively managed fund which aims to achieve growth through capital gains and income from a portfolio of international equities and equity-based financial instruments. For tactical reasons, the fund may also invest in cash or international bonds issued by governments, supranational bodies, other investment grade corporate and non-sovereign bonds and bond-based financial instruments. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

# Long Bond

## For the LifeSave Investment Bond

### Objectives

The Long Bond Fund aims to achieve growth by investing mainly in longer-dated bonds with over ten years to maturity primarily issued by eurozone governments. The minimum duration of the fund may not be less than 75% of its investment universe. The managers may also invest in supranational bonds, other investment grade corporate and non-sovereign bonds and/or bond-based financial instruments. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

	Average return each year	-13.2%	-0.9%	1.1%
Moderate Scenario	What you might get back after costs	€9,555.77	€11,659.90	€13,935.56
	Average return each year	-4.4%	3.9%	4.9%
Favourable Scenario	What you might get back after costs	€10,496.49	€14,085.96	€17,901.29
	Average return each year	5.0%	8.9%	8.7%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,285.61	€1,979.90	€3,224.99
Impact On Return (RIY) Per Year	12.86%	4.16%	3.17%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.97%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.03%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.31%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.86%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Performance

## For the LifeSave Investment Bond

### Objectives

The Performance Fund is an actively managed fund which aims to achieve growth through capital gains and income from a well-diversified portfolio of global equities and equity-based financial instruments. This fund will also invest in bonds issued by governments, supranational bodies, other investment grade corporate and non-sovereign bonds and/or bond-based financial instruments. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,947.52	€5,396.86	€4,485.01
	Average return each year	-30.5%	-14.3%	-10.8%
Unfavourable Scenario	What you might get back after costs	€8,637.77	€10,203.25	€12,379.16
	Average return each year	-13.6%	0.5%	3.1%
Moderate Scenario	What you might get back after costs	€9,884.91	€13,349.73	€17,659.29
	Average return each year	-1.2%	7.5%	8.5%
Favourable Scenario	What you might get back after costs	€11,286.71	€17,427.31	€25,135.01
	Average return each year	12.9%	14.9%	14.1%

# Prisma 2

## For the LifeSave Investment Bond

### Objectives

The Prisma 2 Fund is an actively managed fund which aims to achieve growth through capital gains and income from investing across a diversified range of global asset classes - equities, bonds, property, commodities, cash and alternative assets. The strategic and tactical asset allocation strategies employed by the fund managers aim to generate long-term capital growth while targeting a volatility range of 0.5% - 2% over a rolling 5 year period. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,738.06	€5,047.75	€4,085.95
	Average return each year	-32.6%	-15.7%	-12.0%
Unfavourable Scenario	What you might get back after costs	€8,279.50	€8,841.19	€9,742.50
	Average return each year	-17.2%	-3.0%	-0.4%
Moderate Scenario	What you might get back after costs	€9,599.38	€11,875.61	€14,390.31
	Average return each year	-4.0%	4.4%	5.3%
Favourable Scenario	What you might get back after costs	€11,107.52	€15,919.78	€21,213.16
	Average return each year	11.1%	12.3%	11.3%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,304.49	€2,033.04	€3,351.18
Impact On Return (RIY) Per Year	13.04%	4.21%	3.20%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.98%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.04%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.15%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	2.02%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

# Prisma 6

## For the LifeSave Investment Bond

### Objectives

The Prisma 6 Fund is an actively managed fund which aims to achieve growth through capital gains and income from investing across a diversified range of global asset classes - equities, bonds, property, commodities, cash and alternative assets. The strategic and tactical asset allocation strategies employed by the fund managers aim to generate long-term capital growth while targeting a volatility range of 15% - 25% over a rolling 5 year period. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,414.15	€4,528.34	€3,509.32

# Protected 70

## For the LifeSave Investment Bond

**You are about to invest in a fund that is not simple and may be difficult to understand.**

### Objectives

The aim of the Protected 70 Fund is to offer you the potential to earn real investment returns while limiting your exposure to risk. The fund is an actively managed fund which invests up to 90% in the equity based Dynamic Fund and the balance in a cash fund. The fund has a Protected Price equal to 70% of its highest ever unit price. The protection to the fund from falling below this Protected Price is provided by Barclays Bank plc and not by Zurich Life. The allocation to the Dynamic Fund varies between a target maximum exposure of 90% and a minimum of 0% depending on investment conditions and how close the fund's price is to its Protected Price. The fund will reduce its allocation to the Dynamic Fund when the Dynamic Fund unit price is falling, protecting the fund from further falls. It will increase its allocation when the Dynamic Fund unit price is rising, allowing the fund to benefit from future rises. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.91%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.01%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.03%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	3.33%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

### Zurich Life Assurance plc

Zurich Life Assurance plc is regulated by the Central Bank of Ireland.

Intended for distribution within the Republic of Ireland.

# SuperCAPP

## For the LifeSave Investment Bond

### Objectives

The SuperCAPP Fund is a unitised with-profits fund which aims to deliver a regular return to policyholders consistent with prevailing medium-term interest rates while maintaining the potential for higher growth than a bank deposit account. Investment earnings on the SuperCAPP Fund are distributed to policyholders through Annual Dividends that aim to provide a steady accumulation of policy benefits from year to year. A Special Dividend may also be paid on withdrawal of money invested in the fund for five or more years. The SuperCAPP Fund achieves this by investing in equities, bonds and cash and using hedging to seek to mitigate some of the associated investment risk of those assets. The fund's exposure to equity volatility is normally controlled by limiting maximum losses and gains for the majority of the equity portfolio. Although the percentage of investment earnings distributed to individual SuperCAPP policyholders will vary, SuperCAPP policyholders in aggregate will receive at least 95% of the earnings on their collective investment in the fund. In certain circumstances, such as a period of sustained market underperformance, encashment values may be reduced by the application of a Market Level Adjustment (MLA). The fund is managed prudently and Zurich Life does not expect to apply an MLA other than in exceptional circumstances. However, an MLA may be applied if the Head of Actuarial Function judges it necessary to balance the interests of all policyholders in the SuperCAPP Fund. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity of Zurich to pay you. If Zurich is not able to pay you what is owed, you could lose your entire investment. This fund includes some protection from future market performance but the value of your investment may still go down as well as up. The SuperCAPP fund uses derivatives to seek to mitigate some of the associated investment risks of the assets it holds.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€8,041.40	€7,357.75	€6,824.97
	Average return each year	-19.6%	-7.4%	-5.3%
Unfavourable Scenario	What you might get back after costs	€8,980.48	€9,277.30	€9,782.11
	Average return each year	-10.2%	-1.9%	-0.3%
Moderate Scenario	What you might get back after costs	€9,179.87	€9,980.62	€10,594.49
	Average return each year	-8.2%	0.0%	0.8%
Favourable Scenario	What you might get back after costs	€9,419.19	€10,803.82	€11,662.88
	Average return each year	-5.8%	2.0%	2.2%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,191.62	€1,625.90	€2,352.34
Impact On Return (RIY) Per Year	11.92%	3.84%	2.93%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.91%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.00%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.14%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.89%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

# World Allocation 20/80 (Dimensional)

## For the LifeSave Investment Bond

### Objectives

The World Allocation 20/80 Fund (Dimensional) aims to achieve long-term total return. The fund aims to invest approximately 80% of its net assets in debt and approximately 20% of its net assets in shares. For debt, the fund invests to gain exposure to high quality debt, such as bonds, money market instruments and commercial paper and certificates of deposits issued by governments, other public bodies and companies in developed countries. For shares, the fund invests to gain exposure to developed and emerging markets using a core strategy meaning that the fund has a general exposure to the stock-market with a greater allocation towards shares of small sized companies and value companies. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€7,333.46	€6,059.13	€5,261.55
	Average return each year	-26.7%	-11.8%	-8.8%
Unfavourable Scenario	What you might get back after costs	€8,613.55	€9,466.74	€10,568.65
	Average return each year	-13.9%	-1.4%	0.8%
Moderate Scenario	What you might get back after costs	€9,546.41	€11,622.33	€13,862.58
	Average return each year	-4.5%	3.8%	4.8%
Favourable Scenario	What you might get back after costs	€10,571.05	€14,256.28	€18,167.26
	Average return each year	5.7%	9.3%	8.9%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,315.12	€2,274.84	€3,924.54
Impact On Return (RIY) Per Year	13.15%	4.75%	3.80%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	0.95%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.00%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.03%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	2.82%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**

Zurich Life Assurance plc is regulated by the Central Bank of Ireland.

Intended for distribution within the Republic of Ireland.

# World Equity (Dimensional)

## For the LifeSave Investment Bond

### Objectives

The World Equity Fund (Dimensional) aims to achieve long-term total return. The fund is managed on a discretionary basis and primarily invests in shares of companies with exposure to developed and/or emerging markets. The fund uses a core strategy that has a general exposure to the stock-market with a greater allocation to shares of smaller sized companies and value companies. Value companies are those where, at the time of purchase, the price is low compared to the accounting value of the company. The fund may invest up to 20% of its net assets in emerging markets countries. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,230.51	€4,251.12	€3,210.66

# 5 Star 5 Americas

## For the LifeSave Investment Bond

### Objectives

The 5 Star 5 Americas Fund is an actively managed fund which aims to achieve growth through focusing on Zurich Life's strong sector and stock selection skills in the American region, normally holding up to fifty equities in five different sectors. The fund offers the opportunity to invest in the US and may also have holdings in Canada and Latin America. In the future, the sectoral and equity selection of the fund may be varied to avail of changing market dynamics and so enhance the performance of the fund. The return for the investor will depend on the performance of the portfolio of assets in this fund. The risk profile of this fund is based on the seven year recommended holding period. Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

Investments for longer terms are expected to lower the level of risk and shorter investment terms are expected to increase the level of risk.

### Intended Retail Investor

This investment option will appeal to investors who are seeking long-term real growth while being aware of their ability to lose some or all of their investment. Zurich Life Assurance plc ('Zurich') recommends that the investor is sufficiently informed about financial markets or that they have received appropriate professional advice to ensure they are aware that the value of this investment will move up and down with the performance of the assets.

### What are the risks and what could I get in return?

#### Risk Indicator

The risk indicator assumes you keep the product for seven years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

### Summary Risk Indicator (SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Zurich is not able to pay you. Zurich has classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of Zurich to pay you. This fund does not include any protection from future market performance so you could lose some or all of your investment. If Zurich is not able to pay you what is owed, you could lose your entire investment.

### Performance Scenarios

Investment: €10,000

Scenarios		1 Year	4 Years	7 Years (Recommended Holding Period)
Stress Scenario	What you might get back after costs	€6,313.03	€4,376.66	€3,345.11
	Average return each year	-36.9%	-18.7%	-14.5%
Unfavourable Scenario	What you might get back after costs	€8,170.87	€8,974.04	€10,294.13
	Average return each year	-18.3%	-2.7%	0.4%
Moderate Scenario	What you might get back after costs	€9,801.41	€12,896.76	€16,627.04
	Average return each year	-2.0%	6.6%	7.5%
Favourable Scenario	What you might get back after costs	€11,727.56	€18,487.23	€26,787.91
	Average return each year	17.3%	16.6%	15.1%

### Performance Scenarios

This table shows the money you could get back over the next seven years, under different scenarios, assuming that you invest €10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself and includes the costs of your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest €10,000. The figures are estimates and may change in the future.

### Costs Over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Investment: €10,000

Scenarios	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 7 years (Recommended Holding Period)
Total Costs	€1,408.58	€2,533.92	€4,622.55
Impact On Return (RIY) Per Year	14.09%	4.89%	3.84%

### Composition of Costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories.

This table shows the impact on return per year

One-off Costs	Entry Costs	1.03%	The impact of the costs you pay when entering your investment. This is the most you will pay, and you could pay less. This includes the costs of distribution of your product.
	Exit Costs	0.05%	The impact of the costs of exiting your investment when it matures. This is the most you will pay, and you could pay less.
Ongoing Costs	Portfolio Transaction Costs	0.86%	The impact of the costs of us buying and selling underlying investments for the product.
	Other Ongoing Costs	1.90%	The impact of the costs each year for managing your investments.
Incidental Costs	Performance Fees	0.00%	The impact of performance fees.
	Carried Interests	0.00%	The impact of carried interests.

**Warning: If you invest in this product you may lose some or all of the money you invest.**

**Warning: Past performance is not a reliable guide to future performance.**

**Warning: The value of your investment may go down as well as up.**

**Warning: Benefits may be affected by changes in currency exchange rates.**
