

Prisma Funds

Monthly report

In March, all funds within the **Prisma range** experienced negative performance. The higher risk funds, **Prisma Max** and Prisma 5, were the most affected, with returns of -8.43% and -6.93%, respectively, due to their larger equity allocations. The lower risk funds, **Prisma 2** and **Prisma 3**, also showed losses but were less volatile, returning -0.97% and -2.44%, respectively, owing to their higher allocations in cash and fixed income.

The primary cause of the downturn was our exposure to US equities, which faced challenges over economic growth concerns driven by tariff uncertainties. The higher risk funds saw a sharp decline at the beginning of the month, then recovered some losses, before another drop at month-end due to unexpectedly high inflation and weak consumer sentiment data, which intensified worries about the US economy's health. Despite this volatility, the long-term performance of the funds remains strong. Our investment team continues to stay vigilant and prepared to act swiftly in the best interest of our investors.

↓	Detractors from performance	Equities, Copper, Oil

Annual management charges (AMC) apply. The fund returns shown are net of the AMC deducted by Zurich Life in our unit prices. The fund returns are based on an investment in the funds and do not represent the returns achieved by individual policies linked to the funds. These fund returns may be before the full AMC is applied to a policy. The actual returns on policies linked to the specified fund will be lower because of the effects of charges and in some cases a higher management charge. Source: Zurich Life, April, 2025.

Market Performance

Equity Markets

In March, global equity markets experienced a widespread decline. This downturn was driven by concerns over US economic growth, uncertainty regarding tariffs, and the impact of rising bond and credit yields. Ten out of the eleven MSCI sectors closed the month in negative territory. Investors gravitated towards defensive sectors, with Energy being the sole sector to post a positive return of 0.3%. Technology stocks were hit particularly hard by market volatility, recording a return of -12.6% for the month. European equity markets fared slightly better but still ended the month in negative territory, as investors continued to seek alternatives to US markets.

Bonds & Interest Rates

In March, bond market experienced notable fluctuations due to policy and tariff uncertainty and shifting investor sentiment. The US 10-year Treasury yield rose to as high as 4.36% during the month as the Federal Reserve maintained a cautious stance amid persistent inflationary pressures despite a cooling labour market. In Europe, Germany's announcement of significant fiscal spending to boost economic growth led to a surge in long-term bond yields, with the German 10-year yield rising to 2.74% at month end up from 2.41% in February. The ECB lowered its key interest rates by 25bps, reducing the deposit facility rate to 2.50%. Euro Area inflation eased to 2.2% in March, the lowest since November 2024.

Commodities & Currencies

Commodity markets generally performed well in March. Fears of trade wars and potential recessions led investors to seek 'safe' assets, driving gold prices above \$3,000/oz for the first time on March 14th and continuing to new highs. In Euro terms, gold returned over 4.8%. Copper also saw strong gains, with concerns that President Trump might impose tariffs on copper imports to the US, with copper returning 3.4% in USD terms. By the end of March, the Euro appreciated against the US dollar, with 1 Euro purchasing 1.0816 USD, up from 1.0375 in February.
