

# Markets march higher on economics and earnings

U.S. Markets hit record highs last week with strong earnings and a positive jobs report the main drivers. Employers added 943,000 jobs in June which was well above consensus estimates and the best reading of 2021. Data for April and May was also revised upwards as the unemployment rate fell to a post pandemic low of 5.4%. PMI data was also encouraging with the services reading jumping to 64.1, well above expectations. Whilst the manufacturing reading came in lower than expected (59.5), both metrics are firmly in expansion territory. There is also some early evidence that supply chain bottlenecks are starting to ease slightly.

With 90% of companies having now reported, the S&P 500 is on track to see earnings per share come in 15% ahead of consensus forecasts. 72% of companies have beaten expectations on both EPS and sales, which makes it the strongest quarter for earnings this century.

Eurozone equities also saw a strong week helped by earnings, whilst bond yields (which move inversely to price) moved lower as COVID delta variant fears lingered. Germany looks set to make masks a requirement on public transport until the new year as authorities grapple with reopening timings across Europe. The Bank of England met last week and stated that 'some modest tightening of monetary policy' could happen over the coming months. With inflation on the rise across the developed world, the policy path of central bankers will continue to be a key theme throughout the rest of this year.
