

# Monthly Investment Review

- Financial markets grappled with a confluence of events through the month of May. Concerns over a slowing global economy coupled with rising geopolitical risks were balanced against the continued dovish positioning of the main global central banks and the backdrop of a strong US earnings season.
- The US-China trade deal, which appeared to be drawing to a close, has been sent back to the drawing board once more with investors eyeing the G20 meeting in late June for further potential development. Rate expectations around the globe are shifting downwards in the face of deteriorating global manufacturing PMI data with a number of smaller economies cutting rates throughout May. The Federal Reserve and the ECB have not moved just yet, but markets are closely watching the major central banks reaction to economic data, as the diverging fortunes between manufacturing and services sectors continues. The longest period of US economic expansion has been matched this month, with unemployment at 50-year lows, yet inflation is still below target.
- Given the current market environment, Zurich believes it makes sense to take a neutral stance on equities on a tactical basis.

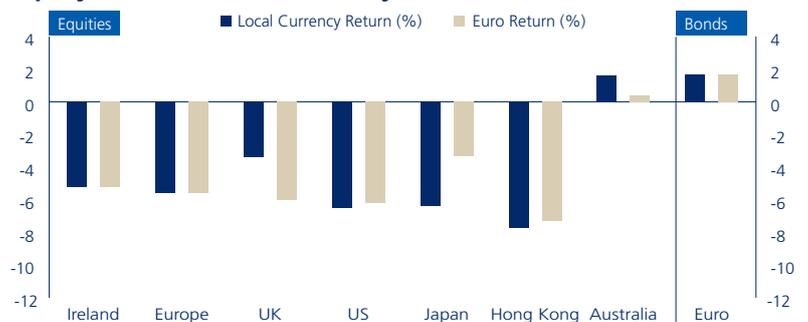

Richard Temperley  
Head of Investment Development

## Activity

Zurich's equity position across our multi-asset funds remains at the middle of ranges, and has done since late March. Whilst we continue to hold a broadly neutral stance on a tactical basis, the recent weakness in markets may lead to buying opportunities over the coming period. Zurich is currently adding corporate bond exposure across the multi-asset funds, at the expense of sovereign debt. Within sovereign debt Zurich maintains a cautious outlook, and bond duration within this sector is low. With regards to geographic equity positions, the main bias is towards Asia-Pacific at the expense of the US. Sector positions were broadly maintained during May. The funds are positively biased towards Technology and Financial Stocks and negatively biased towards Utilities and Real Estate.

## Equity & Bond % Returns: May 2019

This graph shows the performance of the major equity markets over the month of May. The returns are shown in both local and euro currencies. The bond index is the Merrill Lynch Over Five Year Euro Government Bond Index. Source: Bloomberg, June 2019.

## MARKET PERFORMANCE

### Equity Markets

Equity markets fell sharply in May, down 5.5% (in euro terms). However markets are still showing a double digit positive return for 2019 so far. Local currency returns ranged from 1.6% in Australia to -7.7% in Hong Kong. The world's biggest market, the US, was down 6.5% in USD terms. A weakening euro currency helped to soften the blow for Irish investors throughout the month. In terms of sectors, there was a clear divide between defensive and growth sectors. For example the more economically sensitive Technology and Energy sectors returned -8.6% and -8.9% respectively. This contrasts with the defensively orientated Real Estate and Utility sectors which returned -0.1% and -1.8%, which although still negative in absolute returns, were relatively the best performers.

### Fixed Income & Currencies

The Over Five Year Euro Government Bond Index was up 1.1% throughout the month of May, with the year-to-date return now standing at 3.6%. The sector benefited on the back of concerns about global growth and geopolitical tensions. Inflation expectations in the eurozone continue to remain muted. The German ten-year bond yield moved to -0.20 during the month, which marked a new record low for the yield (bond prices and yields move inversely). Stateside, the US ten-year treasury yield moved sharply lower and finished at 2.12% from 2.50%. The Federal Reserve has shifted to a more dovish tone in recent months, with the market now expecting a rate cut before the end of 2019; a striking difference to expectations six months ago. Eurozone rates are likely to remain at current ultra-low levels for the foreseeable future. The Bank of England is not expected to increase rates again for some time mainly due to Brexit concerns.

### Commodities & Currencies

Commodities fell during the month of May, following a strong first four months of the year. The overall index was down 3.7% for the month as Oil, which had been the main driver of the positive return for the sector, saw some of its gains for the year eroded. Oil closed the month at \$53.5 per barrel having started the year at \$45 per barrel. Gold saw a further increase across the month as equity market volatility saw some investors utilise its 'safe haven' status. The precious metal price moved up nearly 2% in local terms throughout the month to close at \$1,305 per troy ounce. The euro currency weakened slightly during May against the US dollar with the EUR/USD rate and closed at 1.12. The rate began the year at 1.15. EUR/GBP close at 0.88, having strengthened throughout the month.

Annual management charges (AMC) apply. The fund returns shown are net of the AMC deducted by each provider in their unit prices. This will vary for each provider, and any difference will impact the relative performance of the funds shown. The fund returns are based on an investment in the funds and do not represent the returns achieved by individual policies linked to the funds. These fund returns may be before the full AMC is applied to a policy. The actual returns on policies linked to the specified fund will be lower because of the effects of charges and in some cases a higher management charge.

\* Performance using most recent data available.

Figures highlighted in beige indicate where the Zurich Life fund has outperformed the sector average.
