

# Monthly Investment Review

A key feature during February was the increase in the US 10-year bond yield caused by expectations of US fiscal stimulus, stronger growth and higher inflation. While we expected yields and inflation to pick up, the recent rise has been quite sharp. Risk assets are being influenced by this increase with the technology sector particularly vulnerable. Despite the narrowing of the earnings yield gap with equities, on balance we believe that slightly higher yields are a positive for equities as they indicate stronger economic growth, the end of deflationary concerns and, most importantly, strong corporate earnings growth. We believe the risk rally is unlikely to be derailed with returns of stocks likely to outshine those of government and corporate bonds. Global economic growth should be robust in 2021 at above trend levels as both economic and monetary policy are supportive, while vaccinations hint at a return to normality. While a weak Q1 was expected, hard data and leading indicators are both encouraging so far. That said, significant slack remains in labour markets, which should keep policy supportive. Meanwhile, vaccinations are progressing at an uneven pace in different countries but should accelerate going forward. While hospitalisations and deaths have been declining, there is little room for complacency and a focus on rapid vaccination is still warranted.

Richard Temperley  
Head of Investment Development

## Activity

Equity positions in our multi-asset funds were unchanged during February and remain well above benchmark. With regards to geographic positions, the main bias is towards Asia, Japan, Europe and the UK. The US was moved from neutral to slightly underweight. Sector-wise, the funds are positively biased towards technology and consumer discretionary stocks and negatively biased towards consumer staples and 'bond proxy' areas. Within the technology sector there has been a tilt from secular into more cyclical stocks. Bond positions are well below the middle of ranges whilst the duration of these bonds is below benchmark. Corporate bonds have been increased at the expense of sovereign bonds over the last 12 months.

## Equity & Bond % Returns: February

This graph shows the performance of the major equity markets over the month of February. The returns are shown in both local and euro currencies. The bond index is the Merrill Lynch Over Five Year Euro Government Bond Index. Source: Bloomberg, March 2021.

## Market Performance

### Equity Markets

World equities (in euro terms) rose by 2.7% in February, giving a total return of 2.4% for the first two months of 2021. Local currency returns for the month for the major markets ranged from 3.5% in Europe to 1.0% in Australia. The influential US market rose by 2.6%. Currency fluctuations had marginal effects with the exception of sterling which was strong against the euro. Regarding sectors in the US during the month, the strongest returns came from energy (+21.5%) and financials (+11.4%), the former being the worst performing sector in 2020. Bond proxy sectors such as utilities (-6.5%) and healthcare (-2.2%) underperformed. There has been some rotation out of growth stocks into value stocks; however, the long term trend favouring growth remains in place.

### Bonds & Interest Rates

The Over Five Year Euro Government Bond Index fell by a significant 2.7% in February, giving a total return of minus 3.5% for the first two months. The German ten-year bond yield moved upwards from minus 0.52% to minus 0.26% with Eurozone bonds continuing to offer no long term value. Equivalent US rates also rose sharply from 1.07% to 1.41%, and may increase further. The Federal Reserve and other central banks have introduced a wave of liquidity since the outbreak of COVID-19 which has included various forms of asset purchases, to support economies and businesses.

### Commodities & Currencies

February saw overall commodity prices rise by a strong 9.3% in dollar terms, the main support again coming from oil. Oil prices rose a staggering 18% in February following an 8% rise in January. The gold price fell by 6.4% during the month, to \$1,729 per troy ounce. The copper price rose by 15.1% during February. The euro currency was little changed in February against the US dollar with the EUR/USD rate remaining around 1.21.

Annual management charges (AMC) apply. The fund returns shown are net of the AMC deducted by each provider in their unit prices. This will vary for each provider, and any difference will impact the relative performance of the funds shown. The fund returns are based on an investment in the funds and do not represent the returns achieved by individual policies linked to the funds. These fund returns may be before the full AMC is applied to a policy. The actual returns on policies linked to the specified fund will be lower because of the effects of charges and in some cases a higher management charge.

\* Performance using most recent data available.

Figures highlighted in beige indicate where the Zurich Life fund has outperformed the sector average.
