

Monthly Investment Review

In February, all three major U.S. equity indices closed positively for the fourth consecutive month. The S&P 500 experienced its largest February gain in almost ten years. The rally in stocks was primarily driven by increased investor interest in artificial intelligence (AI)-related technology companies. The leading AI chipmaker in the market (Nvidia) reported better-than-expected quarterly earnings growth, further supporting this trend. On the other hand, fixed income volatility persisted in February as market expectations for Fed rate cuts this year were adjusted. As we entered 2024, there were expectations of five rate cuts, but this was revised down to three. As a result, bond yields increased across the U.S. curve during the month. Given economic resilience and some signs of remaining inflationary pressures, central banks are expected to maintain their current stance for longer. Consequently, bond markets experienced declines due to the reduced likelihood of immediate rate cuts.

Activity

Our current positioning is broadly neutral equities and bonds and overweight short-dated bonds. Within fixed income portfolios we are looking for bond weakness to add duration. We are maintaining a shorter duration position in our bond portfolio allocation for now on the sense that yields may rise further from 'higher for longer' rates on better growth, possible inflation concerns, or government deficit funding concerns. This also tempers our enthusiasm for equities if yields ratcheted higher. We have our equity weightings back down to neutral levels following the equity market rise experienced so far this year. Our EUR/USD hedge remains in place.

Equity & Bond % Returns: February 2024

This graph shows the performance of the major equity markets over the month of February. The returns are shown in both local and euro currencies. The bond index is the ICE BofA 5+ Government Bond Index. Source: Bloomberg, March 2024

Market Performance

Equity Markets

Equity markets were positive around the globe in February. Broadly, growth outperformed value in most regions. Globally the MSCI World returned 5.3% in Euro terms for the month, with the best performing equity sector in February being Consumer Discretionary, up 7.9%. Only the Utilities sector finished in negative territory in February, returning -1.6%. Interestingly, stock markets largely brushed off the recent rise in yields as investors focused on earnings rather than inflation. The best performing major market in Euro terms was US equities, pushed higher by its high concentration of large tech firms.

Bonds & Interest Rates

Fixed income markets saw a volatile month in February as uncertainty surrounding interest rates persisted. Key indicators of inflation such as higher than expected US CPI, strong employment levels and high non-farm payrolls were met with expectations of interest rates remaining higher for longer. The US Federal Reserve also engaged in a more hawkish tone following its policy meeting, contributing to upward pressure on interest rate expectations. The net effect saw bond yields rise as a result with the Benchmark US 10 Year treasury yield finishing the month at 4.25%, up from 3.91% the previous month.

Commodities & Currencies

Overall, commodities saw negative performance throughout the month. Gold prices were lacklustre as the generally 'risk on' sentiment in equity markets saw outflows from the precious metal. However one commodity that saw positive performance was crude oil. Oil prices have been rising steadily over the past number of weeks as heightened geopolitical uncertainty contributes to upward pressure due to fears of future supply disruptions. Copper, which is often used as a barometer for global economic health, ended the month in negative territory.

Annual management charges (AMC) apply. The fund returns shown are net of the AMC deducted by each provider in their unit prices. This will vary for each provider, and any difference will impact the relative performance of the funds shown. The fund returns are based on an investment in the funds and do not represent the returns achieved by individual policies linked to the funds. These fund returns may be before the full AMC is applied to a policy. The actual returns on policies linked to the specified fund will be lower because of the effects of charges and in some cases a higher management charge.

* Performance using most recent data available.

Figures highlighted in beige indicate where the Zurich Life fund has outperformed the sector average.

Warning: Annual management fees apply. The fund growth shown is before the full annual management charge is applied on your policy.

Warning: Past performance is not a reliable guide to future performance.

Warning: The value of your investment may go down as well as up.

Warning: Benefits may be affected by changes in currency exchange rates.

Warning: If you invest in this fund you may lose some or all of the money you invest.
